Boston, MA 02134 | (+1) 857-498-3413 | jasonqiuqiu720@gmail.com LinkedIn: [linkedin.com/in/jiasheng-qiu-a050591ba](https://www.linkedin.com/in/jiasheng-qiu-a050591ba) | GitHub: github.com/jiaQiu9

Education

Boston University | Boston, MA | *Master of Science in Computer Science* | **Sep 2024 – Dec 2025**

- **Relevant Coursework:** Blockchain and Its Applications, Distributed Systems, Software Engineering, Database and Its Application, Computer Networks.

Boston University | Boston, MA | *Bachelor of Arts in Computer Science* | **Sep 2020 – May 2023**

Technical Skills

- **Languages:** Java/ SpringBoot, Python, JavaScript/TypeScript, Go, Solidity, C/C++, Kotlin, SQL, HTML/CSS.
- **Frameworks & Libraries:** SpringBoot, Next.js, React, Node.js, Flask, Jetpack Compose (Android), Prisma, Hardhat.
- **Infrastructure & Tools:** AWS (S3), Docker, Git, PostgreSQL, MySQL, MongoDB, Stripe API, Clerk Auth.
- **Core Competencies:** Distributed Systems, Blockchain/NFTs, Object-Oriented Design (OOD), Agile Methodologies, Data Structures & Algorithms.

Professional Experience

Be The Messenger (BCS & Associate X Boston University Spark) | Lead Software Engineer *Boston, MA* | **Sep 2025 – Dec 2025**

- **Technical Leadership:** Architected the transition of an MVP into a scalable SaaS platform. Established code review standards and CI/CD workflows for a 3-person development team.
- **Full Stack Development:** Engineered a Course Management System using **Next.js**, **PostgreSQL**, and **Prisma**, enabling administrators to manage modular educational content (videos, PDFs, Zoom links).
- **Monetization & Security:** Integrated **Stripe API** to architect a secure billing system for tiered memberships and coaching packages. Implemented secure authentication and session management using **Clerk**.
- **Infrastructure:** Optimized media delivery by migrating storage to **AWS S3**, ensuring low-latency streaming for high-capacity audio/video assets.

Academic & Teaching Experience

Boston University | Graduate Grader *Boston, MA* | **Sep 2025 – Dec 2025**

- **Course:** CS 595 - Blockchain and Its Applications.
- Reviewed and evaluated complex assignments involving smart contract development and decentralized architecture.

Boston University | Grader *Boston, MA* | **Jan 2023 – May 2023**

- **Course:** CS 460 - Introduction to Database Systems.
- Evaluated database design projects and assignments.

Boston University | Teaching Assistant *Boston, MA* | Jan 2022 – Jul 2022

- **Course:** CS 411 - Software Engineering.
- Mentored over 50 undergraduate students on the full software development lifecycle (SDLC), including Agile methodologies, Git version control, and CI/CD.
- Diagnosed and debugged student codebases in Java, providing constructive feedback to improve logic and architectural patterns.

Technical Projects

RecipyVerse | Decentralized Recipe Marketplace *Stack: Solidity, Hardhat, ERC-721, JavaScript* | Jan 2025 – May 2025

- Architected a decentralized application (dApp) allowing users to mint coupons as unique NFTs.
- Designed a **Factory Pattern** for on-demand NFT collection creation and a custom exchange contract facilitating 1-to-1 **atomic swaps**.
- Developed part of the comprehensive unit tests using **Hardhat** to validate smart contract security, functionality, and gas efficiency prior to deployment.

Distributed Raft & MapReduce System *Stack: Go, Bash, Distributed Algorithms* | Jan 2023 – May 2023

- Implemented a fault-tolerant distributed key/value store by reproducing the **Raft consensus algorithm**.
- Engineered core mechanisms including **Leader Election**, **Log Replication**, and safety rules to maintain data consistency across server clusters.
- Validated system resilience against network partitions and server crashes using custom Bash simulation scripts.
- Integrated a **MapReduce** framework on top of the Raft cluster to execute parallel computations on distributed data.

Legends of Valor | RPG Game Engine *Stack: Java, Design Patterns* | Fall 2024

- Built a robust game engine supporting multiple game variants (RPG and MOBA-style) by implementing **Strategy** and **Factory** design patterns to decouple game logic.
- Implemented complex state management and character hierarchies to ensure code reusability and maintainability.

PhotoShare | Social Platform *Stack: Python, Flask, MySQL, HTML/JS* | Jan 2022 – May 2022

- Engineered a high-concurrency image hosting service. Implemented **database indexing** on a normalized **MySQL** schema to optimize query performance for complex user relationships.
- Built RESTful APIs with **Flask** to handle high-volume user requests and data retrieval.

Awards & Honors

Hackathon Winner | "Digital Eye" Accessibility Platform *VMware and DFroboots Award* | Dec 2020

- Architected an award-winning accessibility system to enhance public transit safety for visually impaired individuals.
- Integrated a mobile application with embedded hardware sensors to provide real-time, precise audio guidance for boarding and navigation.
